FAQ:

Q. What is Restore™ and why should I use Restore™?

A. Restore™ is not a paint or a stain. Restore™ is a one-part, water based coating that is the cost effective alternative to replacing most wood and concrete surfaces with minor surface imperfections and damage caused by moisture, UV, cracks, and discoloration. This coating acts as a liquid armor resurfacer providing a new, slip resistant surface that may extend the life of older decks and concrete for years. Restore™ saves money, beautifies and protects! It is also good for the environment. By extending the life of your existing deck or patio, you avoid adding to the landfills with tons of old concrete or old treated wood that will remain for years and may contain harmful chemicals.

Q. Can I use Restore™ on any surface?

A. Restore™ should only be applied to stable wood and concrete surfaces. Deck boards that are unsafe and severely deteriorated should be replaced. Concrete surfaces that are severely chipped or cracked should be repaired. The surface must be clean and free on dirt, mildew and other organic growth to ensure proper adhesion. Slick surfaces such as smooth garage floors and freshly painted wood or wood treated with water repellent materials may not allow for good adhesion.

Q. What special preparation is required?

A. Clean the surface with a mild household cleaner and water. If necessary use a brush to remove any embedded dirt and grime. A pressure washer may provide best results. The surface should be dry before application however, If applying in extreme warm and dry conditions it is recommended to routinely mist the surface area just before application to prevent premature drying.

Q. Why is Restore™ packaged as two gallons in one box? What is the coverage of one box?

A. When applied properly, The film thickness of Restore™ will be ten times thicker than regular paint. One box or kit (2 gallons) of Deck Restore™ or Concrete Restore™ will cover approximately 100 square feet with one coat. Two coats are required for an even finish. A typical 10" x 10" surface will require two kits to complete the project. Restore™ is also tintable and the single gallon cans are compatible to the paint mixing equipment for easy mixing and shaking.

Q. How do I get an even finish when applying Restore™?

A. Be careful not to overspread. Restore™ is designed to be applied thick. A fully loaded ¾" roller will spread 5-7 Square feet.

Q. How many coats of Restore™ are required?

A. Two coats are recommended to achieve complete uniformity and to enjoy the optimum benefits of the product.

Q. What is the best method for clean up after using Restore™?

A. Restore™ is water based and will clean up with soap and water. For best results, clean up should be done before product dries. Cover protected areas to avoid spatters during application.

Q. How long does the coating last?

A. When properly applied, Deck Restore™ and Concrete Restore™ will add years of life to your deck or patio and with simple maintenance and occasional re-coats, your system could last as long as you own your home. Deck Restore™ and Concrete Restore™ come with a Limited Lifetime Warranty.

Q. The first coat looks "spotty and blotchy." Have I done something wrong?

A. The first coat of Deck Restore™ and Concrete Restore™ acts as a primer/bond coat. After applying the first coat it is common that some parts of the deck or concrete have an even texture and other parts do not. Your second coat will fill these gaps and create an even, uniform finish and texture.

Q. How long do I let it dry between coats?

A. Two to Four hours between coats. Drying time may vary depending on weather conditions.

Q. Can I use Restore™ on my driveway or garage?

A. Not recommended. Slick surfaces such as "floated", smooth concrete or some composite decking materials that are formulated with water repellent. Slick surfaces will not permit good adhesion.

Q. If I decide to change the color, what can I do?

A. Deck Restore™ and Concrete Restore™ are available in 40 tintable colors. A surface that has been previously coated with Restore™ may be re-coated with another color selection of Restore™ or a premium quality exterior paint that is designed to hold up on horizontal surfaces.
